

# MRI ROOM SOLUTIONS

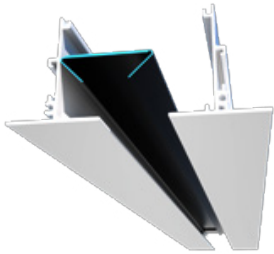

- + Price offers a comprehensive line of air outlets with construction and operating ranges ideally suited to installation in MRI rooms.
- + Only non-ferrous materials and hardware are used. This includes the avoidance of mildly magnetic ferrous materials such as austenitic stainless steels, making the MRI construction option ideal for use in any MRI room regardless of ceiling height or machine offset from walls.
- + Specifying MRI construction option provides assurance that all options and accessories are MRI compliant. This is clearly indicated on submittal drawings for clarity in the bidding process and for building documentation.

*Model CF – Custom Flow linear diffuser with MRI option*

# PRODUCTS AVAILABLE WITH MRI CONSTRUCTION OPTIONS
